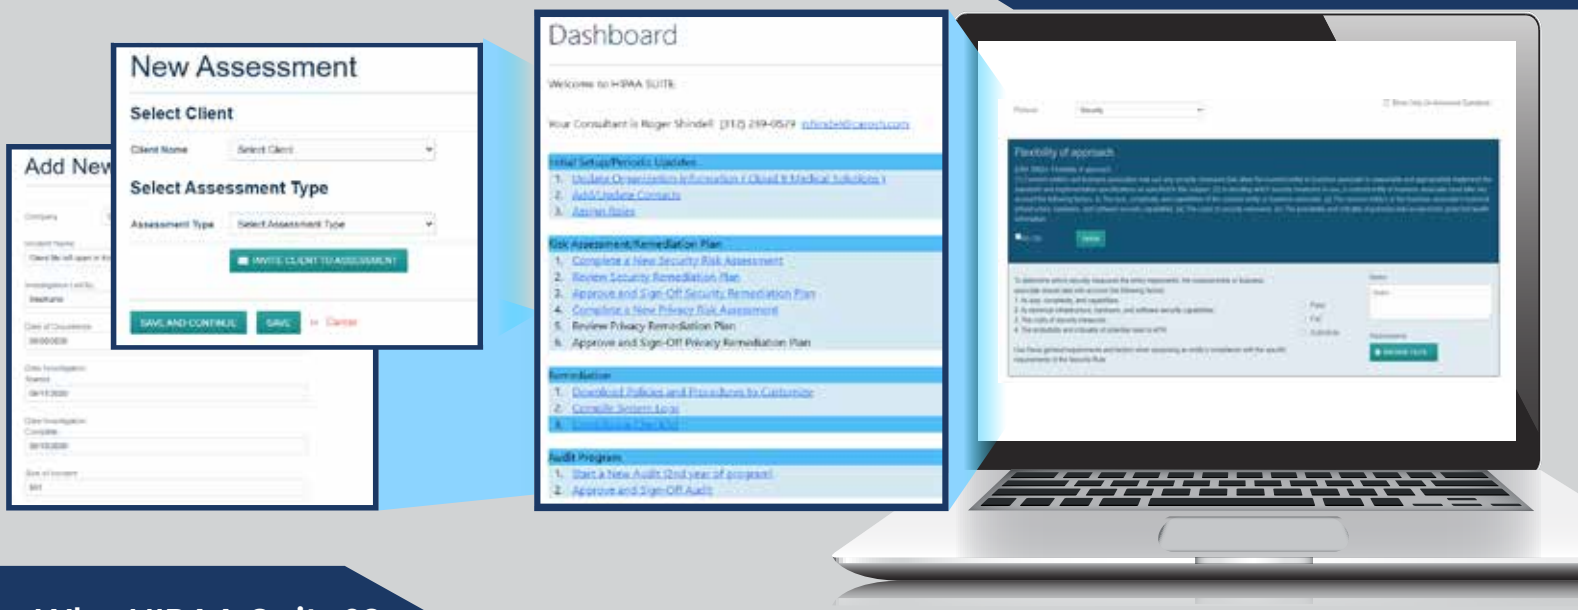
HIPAA Suite® - Integrated HIPAA Compliance

Risk Assessments, Remediation Plans, Security Incidents, Training, Audit Program, Business Associate Management, and 6-Year Archiving



Why HIPAA Suite®?

Compliance is under your control

HIPAA Suite® is your one place platform to get you and keep you, HIPAA compliant. We've done all the work, to manage your HIPAA compliance program to assure both efficiency and follow through. Depending on your requirement, HIPAA Suite® will guide you through the complete process, or you can jump from task-to-task, customizing your workflow to your specific needs.

Risk Assessments

When conducting your risk assessments (Security and Privacy), HIPAA Suite® takes the complexity out of the process. No more having to assign probabilities and impacts, HIPAA Suite® takes the complexity out of the process, and builds your risk profile question by question. Once completed automatically generates your required remediation plans. The risk assessments are designed to be broken up by functional area, increasing the efficiency by which you are able to complete your assessments.

Incident and Breach Support

Privacy and Security incidents and breaches are a fact of life. HIPAA Suite® provides expert assistance in evaluating incidents, determine if they are reportable breaches, and if they are, provides a step-by-step plan to mitigate the breach, internally, and report it to the appropriate regulatory agency. Tracking all incidents and breaches goes a long way to mitigating the possibility of being assessed fines and penalties.

Required Audit Protocol

Being able to document that you are operating as you state in your implemented policies, procedures, and safeguards can be a complex and time-consuming process. HIPAA Suite's® audit module simplifies the process of documenting your compliance. Designed to emulate the audit protocol published by OCR in their random audit program, your results will demonstrate what OCR expects. The HIPAA Suite® audit module also assists you in your annual HIPAA requirements allowing you to update your risk assessments, remediation plans, and policies & procedures, all while conducting your required audit.

Integrated Training

HIPAA Suite's® training module lets you manage all your training requirements, all from a central point. Add and remove trainees and run reports. Segregate your reports by location, by department, by functional groups, all to simplify the management of your required HIPAA training.

Business Associate Management

From evaluation of who is and who isn't a business associate through evaluating your BA's compliance with the HIPAA regulations, through managing the business associate agreements, HIPAA Suite® assures you have all your requirements covered.

Data Archiving

When OCR comes calling, you only have 15 days to comply with their document request. Additionally, OCR can ask for 6 years' worth of history for anything related to HIPAA. HIPAA Suite® manages this process for you assuring not only that you have your 6 years of data available, but that you can recover all of OCR's requests within the required timeframe.

A Complete All-In-One Software Fully Customizable to Fit Your Needs

- Take advantage of industry-focused user interface and policy and procedure templates.
- Workflows segregated by functional tasks, departments and/or multiple locations.
